DIAGNOS' technology woke up the sleeping giant - Impressive results of copper in Haiti

Brossard, Quebec, Canada – February 29, 2008 - DIAGNOS inc. ("DIAGNOS" or the "Corporation") (VENTURE TSX: ADK), a leader in the use of artificial intelligence ("AI") and advanced knowledge extraction techniques, is pleased to announce impressive results on its copper targets in the North-Eastern Department of Haiti. Indeed, the Corporation was mandated in 2006 for the account of SGH, a private company carrying on its activities of exploration in Haiti, to target high probability zones for base metals and gold.

Following recognition work carried out by RSW-Béroma, the trench sampling shows the accuracy of the targets generated by CARDS (Computer Aided Resources Detection System), DIAGNOS' Artificial Intelligence system. As a matter of fact, the target number 6 presents a very mineral-bearing outcrop on a twenty meters length for nearly one meter of thickness. The rocks of this formation, most probably an expression of the Series of the Perches are visible in several points of the Faille deposit which extends on a surface of about 6.4 km².

The returns of the analysis of the samples taken on the site showed impressive copper values of:

Sample 1	7.46%
Sample 2	6.21%
Sample 3	9.51%
Sample 4	0.10%
Sample 5	6.69%

"DIAGNOS, once again shows the sharpness of its technology", underlines Mr André Larente, president and CEO of DIAGNOS. "This time, at a place where the man never walked. Indeed, this outcrop would probably never have been visited but for the fact that we had high probability targets of copper on it. The Artificial Intelligence will have made it possible to awake this sleeping giant."

About DIAGNOS

DIAGNOS' 20-person multidisciplinary team includes professionals in geophysics, geology; artificial intelligence, mathematics, as well as, remote sensing and image interpretation. DIAGNOS' scientific team is complemented by an experienced administrative, marketing, and sales staff to support the Corporation's expanding client base. In addition to data mining and target generation, DIAGNOS acquires and sells mineral properties and offers project management consulting services. This horizontal integration makes DIAGNOS, the leader in its sector of industry.

For further information, please visit our Website at www.diagnos.ca. The Corporation's objective is to develop a royalty stream by significantly enhancing and participating in the exploration success rate of mining and oil and gas companies.
